DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claim1-5,7,8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tamada in view of Sway-Tin et al. Tamada teaches the claimed subject matter except for showing use of current maximum power available in the control scheme. The patent to Sway-Tin et al are applied for teaching use of power sensing in a vehicle to aid in the control scheme. This leads to more effective use of the vehicles power and enables better performance. In view of this teaching it would have been obvious to modify Tamada to use power sensing in the control scheme, to enhance the performance of the control scheme. As per claim 2 Tamada teaches use of an alternator as the power

Art Unit: 3742

source, and as per claim 4 Sway-Tin et al teach the claimed display means. As per claim 8-note use of current limiter in Sway-Tin et al.

Claims 6 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tamada in view of Swat-Tin et al as applied to claims 1-5,7,8 above, and further in view of Ohkuma et al. Tamada et al as modified teach the claimed subject matter except for showing the use of PI control to effect the temperature control scheme. Ohkuma et al is applied for teaching that accurate temperature control in a vehicle can be attained using Pi or PID control and in view of this teaching it would have been obvious to modify Tamada et al further to include an integral term in combination with the proportional control in the control scheme, with the benefit of more accurate control and less hysteresis effected.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Curti and Dojack are cited for disclosing temperature controllers of interest to the instant invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark H Paschall whose telephone number is 703 308-1642. The examiner can normally be reached on 7am - 3pm.

Art Unit: 3742

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robin Evans can be reached on (703) 305-5766. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
